

Awning system

## markilux markant

The free-standing textile sun and wet weather protection system in a purist design.

[markilux.com](http://markilux.com)

**markilux**  
safe timeless beautiful

## Product Characteristics

1 wall fixture to one side with wall sealing profile <sup>1)</sup>

2 water drainage through the centre of the fabric in the direction of extension

3 asymmetrical footplates with water drainage

4 installation below ground – water drainage below <sup>1)</sup> or above ground <sup>1)</sup>

5 the inside of the frame system can be cleaned with ease

6 cover support profiles

7 the fields can be extended independently of one another (2-field unit)

8 combination with markilux 625 tracfix and markilux 776 tracfix <sup>1)</sup>

9 LED-Line in the frame and / or in the gutter <sup>1)</sup>

10 LED-Spots in the gutter <sup>1)</sup>

11 integrated markilux infrared heater <sup>1)</sup>

12 radio-controlled motor io with markilux hand-held transmitter

1) Optional accessories

## Product Characteristics

### Description

- free-standing, rectangular awning system on four posts, defined as sun and wet weather protection
- the integrated single or double awning lends the system a unique textile character
- rainwater drains through the specially manufactured cover into a gutter running down the centre of each awning
- areas up to 3 x 6 m can be protected using one cover or 6 x 6 m using 2 covers.

### Special features

- radio-controlled motor in io technology as standard
- in a 2-field unit, each awning can be operated independently
- the tried and tested tensioning system – with drive belts and integrated gas pistons
- with tracfix system, the continuous lateral cover guidance system that leaves no gap between the cover and guide tracks
- cover support profiles across the awning (removable if required) offer even greater stability
- the awning cover is bonded with stabilising vertical panel joints – in the case of the sunvas / sunsilk / sunbow / perla FR series the standard panel width is 120 cm (sunvas oversized fabric material is used seamlessly up to a post centre to centre separation in the width of 250 cm)
- rainwater drains through holes in the material into a gutter which runs centrally from back to front
- water is channelled to the outside via the gutter and down to the ground via the posts
- posts optionally with water drainage above ground to the side or water drainage below ground
- numerous lighting and heating options
- can be combined perfectly with the vertical blinds markilux 625 tracfix and markilux 776 tracfix (the latter optionally with panorama window) to create a modern, interior design – outdoors

### Dimensions

- 1 field 1 motor: width 213.5–312.5 cm, extension maximum 612.5 cm
- 2 fields 2 motors: total width 313.5–612.5 cm, extension maximum 612.5 cm, field widths always symmetrical
- total height standard 260 cm, minimum 64 cm – maximum 350 cm (post cannot be shortened on site)

### Awning profiles

- extruded aluminium, in façade quality, powder coated
- square post profile 125 × 125 mm with integrated cable ducts, very easily accessible
- the frame is visually square in appearance, height 280 mm

### Corner joints

- corner joints of the frame made of die-cast aluminium, cover profiles made of extruded aluminium, powder coated
- the sophisticated design ensures easy access to and maintenance of the front profile of the frame

### Post footplates

- the post feet can be adjusted by 120 mm in height to allow the system to be levelled
- asymmetrical footplate covers as standard 201 × 201 mm made of die-cast aluminium, powder coated
- optionally without footplate covers for installation below the ground
- optionally with adapter plates for installation on Krinner screw-in foundations

### Use in wind, rain and snow

- the awning or awnings have to be retracted if the wind speed exceeds 48 km/h. Gusts of wind can cause the cover to hit the cover support profiles / rain gutter and thus generate noise. As a result, draining water may miss the gutter. The awning system must be retracted in gusty wind conditions
- the awning can be used in the case of “normal” rainfall. In the case of heavy rainfall, the system must be retracted
- snow must not be allowed to load the system

**N.B!** : For installation we recommend the use of two electric lifts. E. g. “Portable awning lift Upter CM 340” bearing load 120 kg / extendable height 3.3 m from KeM. Tech [www.kemtech-ksf.com](http://www.kemtech-ksf.com).

For additional information and configuration options, please refer to the section “General Information” and “markilux Optional Accessories” in the volume “Designer Awnings for Conservatories, Glass Canopies and Windows”.

## Frame colours

### markilux frame colours without surcharge

traffic white, RAL 9016

metallic aluminium, RAL 9006

grey brown, similar to RAL 8019

off-white textured finish, 5233 <sup>1)</sup>

stone grey metallic, 5215 <sup>1)</sup>

anthracite metallic, 5204 <sup>1)</sup>

havana brown textured finish, 5229 <sup>1)</sup>

### Non-standard powder-coated finish

Bespoke frame colours incur a surcharge – matt, metallic, finely textured and pearl finishes as well as other colour ranges (DB, Tiger etc.) on request. All frame colours are available at a surcharge with enhanced corrosion protection.

Colours may differ slightly from those depicted in both hue and finish.

<sup>1)</sup> textured finish

## Lighting and infrared heater options

markant 1 field, 1 motor, free-standing or with wall connection (fig. by way of example)

### Option 1:

LED-Line in the frame

### Option 5:

LED-Line in the frame  
and LED-Spots fitted to the gutter

### Option 2:

LED-Line in the gutter

### Option 3:

LED-Line in the frame and  
LED-Line in the gutter

### Option 6:

1 infrared heater fitted to the  
gutter  
can be combined with Option 1

### Option 4:

LED-Spots in the gutter

### Option 7 <sup>1)</sup>:

2 infrared heater fitted to the  
gutter  
can be combined with Option 1

### Controls

LED-Line in the frame	→ can only be switched on / off and dimmed all around
LED-Line in / LED-Spots fitted to the rain gutter	→ can only be switched on / off and dimmed together (1field and 2 fields)
infrared heater	→ can be switched on / off and dimmed individually.

**N.B.:** infrared heaters cannot be added at a later stage.

1) Recommended when the centre to centre post separation in the direction of awning extension is > 400 cm.

## Lighting and infrared heater options

markant 2 fields, 2 motors, free-standing or with wall connection (fig. by way of example)

**Option 1:**  
LED-Line in the frame

**Option 5:**  
LED-Line in the frame  
and LED-Spots fitted to  
the gutters

**Option 2:**  
LED-Line in the gutters

**Option 3:**  
LED-Line in the frame  
and LED-Line in the gutters

**Option 6:**  
2 infrared heaters fitted to the  
coupling profile  
can be combined with  
options 1, 2, 3, 4, 5

**Option 4:**  
LED-Spots in the gutters

**Option 7 <sup>1)</sup>:**  
4 infrared heaters fitted to the  
coupling profile  
can be combined with  
options 1, 2, 3, 4, 5

### Controls

LED-Line in the frame	→ can only be switched on / off and dimmed all around
LED-Line in / LED-Spots fitted to the rain gutter	→ can only be switched on / off and dimmed together (1field and 2 fields)
infrared heater	→ can be switched on / off and dimmed individually.

**N.B.:** infrared heaters cannot be added at a later stage.

1) Recommended when the centre to centre post separation in the direction of awning extension is > 400 cm.

## Lighting options LED Line

LED-Line all around in the frame profile

LED-Line in the gutter, on both sides

### Technical specification

operating voltage	230 V, 50 Hz
power output per metre	9 W / metre
number of LEDs per metre	90 units / metre
number of transformers	1 unit
light temperature	warm white
IP protection class	IP 44
service life	approx. 15,000 hours

**LL** = LED-Line length  
**RPL** = frame profile length  
**RRL** = front gutter length

dimensions in mm

Lighting options LED-Spots

LED-Spots fitted to the gutter, on both sides

Technical specification

operating voltage	230 V, 50 Hz
power output of one LED spotlight	5 W
light source	LED (12 V)
number of transformers	1 unit
light temperature	warm white
IP protection class	iP 44
service life	approx. 20,000 hours

SAM H = order dimension = centre to centre post separation in the direction of extension  
VB = adjustment range

dimensions in mm

## markilux infrared heater 2500 W

Dimmable in 3 stages with integrated radio-controlled receiver 868 MHz io

### Special features

- soft start function with reduced initial current surge
- cooling fins on the back prevent excessive heating of the mounting surface
- the asymmetrical reflector gives optimum heat distribution
- infrared halogen lamp with “Ultra Low Glare” heating tube technology and pleasant colour temperature
- minimum installation height 1.8 m
- minimum distance to any irradiated object 1 m

markilux heaters offer the benefit of cosy infrared warmth – making your stay outside a pleasant one. While producing a minimum of glare, they turn the energy used into a maximum of warmth. Infrared heaters are perfect leisure time companions for garden, terrace, balcony and under awnings. They are efficient, conserve energy and create a warm atmosphere at the touch of a button.

### Technical specification

power supply	230 V, 50 Hz, 16 A
power supply wire cross section	H05SS-F2G 3 × 1,5 mm <sup>2</sup>
power output (per heater)	2500 Watt
length × depth × height	890 × 100 × 155 mm

### Overview of dimensions

### Maximum infrared radiation intensity Infrared heater 2500 Watt

Core radiation zone  
(50 % of the central radiation intensity)

## Power supply

### Recommendations for radio-controlled io motor / lighting / infrared heater

All cables only ever exit at the base of one post (state when ordering). The wire cross-section for the power connection to VAC 50 Hz are recommendations and can also be chosen larger as long as they fit the plugs / sockets.

Connection only to a VDE-certified 230. V AC connection, which must be protected by an RCCB. For an infrared heater, the house installation for the power supply must be protected by a circuit breaker of at least 16 A with higher inrush current (trigger characteristic C).

Connection for	Number of wire cores	Number of cores × wiring cross section
motor for 1 field	1	3 × 1,5 mm <sup>2</sup>
motors für 2 fields	1	5 × 1,5 mm <sup>2</sup>
	2	3 × 1,5 mm <sup>2</sup>
LED-Line frame	1	3 × 1,5 mm <sup>2</sup>
LED-Line in the frame and LED-Line in the gutter	1	3 × 1,5 mm <sup>2</sup>
infrared heater (each)	1	3 × 1,5 mm <sup>2</sup>

Power connection type →	Permanent		Flexible
Cable description →	NYN-J	NYM-J	H07RN-F
	Ground cable for the permanent installation <ul style="list-style-type: none"><li>• indoors</li><li>• outdoors</li><li>• under the ground</li><li>• in concrete</li></ul>	Plastic-insulated sheathed cable <ul style="list-style-type: none"><li>• for the permanent installation below , in or on top of plaster in dry or humid rooms</li><li>• permitted outdoors only with additional protective tube</li><li>• not permitted for installation under the ground</li></ul>	Flexible rubber-sheathed cable <ul style="list-style-type: none"><li>• for outdoor use</li><li>• for connection to a junction box on a building</li></ul>

# Schematic diagram – water drainage

1 field

2 fields

**N.B!** If the unit is to be used in rain, a fabric from the perla FR ranges should definitely be selected. Standard fabrics from the sunsilk, sunvas and sunbow ranges do not remain waterproof if subjected to rainfall for a longer period.

**perla FR.** This flame-retardant and water-repellent sunsilk fabric with an additional transparent, highly water-resistant coating on the underside of the fabric offers optimum protection against rain.

## Water drainage in the cover

The water drains into the rain gutter underneath through centrally placed cross holes in the cover.

## Concrete foundation

To be supplied on site:

Concrete foundations with compressive strength C25/30 (previously B25) with rebar matting basket made of rebar matting Q188.

The footplates **F2** are to be fitted to the concrete footings using Fischer marine-grade stainless steel anchor bolts FAZ 16/50 aus A4 and washers certified to DIN 9021 (or equivalent).

Alternatively fixture can be realised using Krinner ground screws. Adapter sets for installation to these are available.

**SAM** = post separation centre to centre
