

Pergola awning

# Plaza Viva

## Plaza Viva Stretch/LED | OptiStretch/LED

**Plaza Viva** stands for reliable sun and rain protection on the patio. It is incredibly wind-resistant and integrates subtly into the overall look of the house. Not forgetting its practical use on facades that don't have enough load-bearing capacity to mount a folding arm awning. Technical innovations such as the optional lowerable telescopic post, the OptiStretch version, integrated LED lighting and gear handle operated Valance Plus leave almost nothing to be desired.

### 3-part rain protection system

#### **Compensation joint:**

Reduces the load on the entire construction when lowering the post

#### **Wall bracket with floating bearings:**

Also reduces the load on the awning when lowering the post

#### **Telescopic post:**

Can be lowered using the gear handle to drain rain off reliably

#### **Integrated LED lighting:**

Moody patio lighting

#### **No visible fixings:**

Elegant and slimline design

# Plaza Viva Highlights

02

**New flat rope:**  
Quiet and extremely  
tear-resistant

**Service opening:**  
Easier access to the drive and  
control components with  
BiConnect

**Plaza Viva OptiStretch:**  
Held captive on 4 sides,  
no light gap,  
with strip reinforcement

**Plaza Viva Stretch:**  
Held captive on 2 sides,  
with light gap,  
with corner reinforcement

# Plaza Viva Benefits

## Large surface protection from the sun – thanks to sturdy aluminium posts

The Plaza Viva stands on solid posts. Making it suitable sun protection for large terraces and offering reliable protection against surging winds.

- For larger dimensions up to 30 m<sup>2</sup>
- Can also be installed on difficult and insulated facades due to reduced load acting on the fixings in the wall brackets
- Wind-resistant up to wind force 6 on the Beaufort scale
- Elegant design, almost no visible screws

## Telescopic post for rain to drain off reliably (optional)

The optional telescopic post can be really easily fully lowered on one side using the gear handle thus ensuring that rain drains off easily with a pitch awning of 4° or more.

- Just one telescopic post possible per construction
- Reliable rain protection
- No pooling

Please observe the important details in the Plaza Viva telescopic post section.

## Compensation joint and floating bearing

The combination of a compensation joint and wall bracket with floating bearings reduces the load on the entire construction when the awning is lowered using the gear handle.

- Rain drains off reliably (no danger of pooling)

## Clever Stretch and OptiStretch versions

**Plaza Viva Stretch:** the well positioned and even fabric creates a cosy atmosphere.

- **Stretch:** held captive on 2 sides, cost effective solution, easy to install

**Plaza Viva OptiStretch:** completely closed all round, ensures a well tensioned fabric without any hanging fabric edges on the side. In very large constructions, it reduces the central sagging of the fabric during extension and retraction.

- **OptiStretch:** held captive on 4 sides, no light gap

## Plaza Viva Benefits

### Reliable tension system – with new quiet flat rope

The tried and tested clamping system is used with the Plaza Viva with a new flat and at the same time tear-resistant rope. The rope winds up extremely quietly over itself instead of side by side. This prevents the rope from bouncing.

- Long-lasting equalised fabric tautness with pulley block technology
- The flat rope is quiet and tear-resistant, it prevents the rope from twisting and bouncing and does not fray on the sides

### Service opening – convenient access

The opening in the cassette offers easy access to the motor input with BiConnect.

- Easier access to components
- The programming of the drive's end positions is made easier by the service opening
- Decoupling of the wind sensors during maintenance

### HighPower LED spotlights – for an amazingly beautiful atmosphere

The LED spotlights integrated into the cassette produce atmospheric lighting on the patio.

- 30,000 hours of LED lighting with minimal energy consumption
- LED infinitely dimmable using weinor's BiConnect control

### Valance Plus – vertical privacy and sun protection

The Valance Plus is elegantly integrated into the Plaza Viva's front profile. It provides privacy and glare protection even with a low-lying sun.

- Can only be operated by gear handle up to 2100 mm
- Patented OptiFlow-System® to keep fabric ideally positioned and to close the bottom rail safely
- Valance Plus may only be extended and retracted when using a telescopic post if the telescopic post is cranked right up to the top
- Can be combined optionally with the LED Design light bar

# Plaza Viva LED

02

## LED lighting – 30,000 hours of lighting with extremely low energy consumption

The select high-power LED components are patented and represent the very best in weinor quality:

- Integrated into the cassette
- Atmospheric light thanks to special glass lenses
- Lighting remains on even when awning is retracted
- Highly energy-efficient
- Operating life of 30,000 hours
- Infinitely dimmable when used with BiConnect radio control
- Easy to service: simply replace individual LED lights without uninstalling the awning

### Integrated LED lighting

Awning width in cm	Number of separate LED spotlights	Awning width in cm	Number of separate LED spotlights
– 299	5 – 6	450 – 499	9 – 10
300 – 349	6 – 7	500 – 549	10 – 11
350 – 399	7 – 8	550 – 600	11
400 – 449	8 – 9		

## Joined systems – distance between LED spots in transition area

The distance between the LED spotlights in a multi-section unit's transition area can be 500 mm to 1500 mm.

# Plaza Viva Telescopic post

## Telescopic post (optional)

The optional telescopic post can be really easily lowered on one side using the gear handle providing an awning pitch of 4° (Valance Plus option 5°) and fully cranked down post so that rain drains off reliably. Please note: The system is designed for a maximum rainfall class of 2 (56 l/h/m<sup>2</sup>).

### Important information

- The telescopic post should ideally always be moved into the highest or lowest position as it can only be locked in place there. If it is moved to a position in between it may lower of its own accord because there is no locking in place.
- The construction may only be extended and retracted if the telescopic post is right up the top
- The mounting of telescopic posts on both sides is not possible as this would cancel out the benefit.

**Update**

- It would then only be guaranteed that rain would drain off reliably from a pitch of 14° again.
- 2 telescopic posts are also unsuitable for protection against the low-lying sun as lowering between 150 to 350 mm does not offer sufficient protection. The Valance Plus is ideal for this.

### Gear handle position

Standard gear handle height 900 mm.  
Different gear handle position on request.

Controlled draining with lowered post.

If the post is not lowered, the water may collect on the Plaza Viva leading to pooling.

When exceeding rain class 2 (56 l/h/m<sup>2</sup>), the Plaza Viva must be retracted. Risk of damage!

### Compensation joint and floating bearing

When lowering the top part of the post using the gear handle, it reduces the load on the construction and it remains inherently stable. The wall bracket with floating bearing and compensation joint on the upper part of the post ensure that the entire awning adapts perfectly to the pitch.

02

### Paravento (optional)

The Paravento side screen is the perfect complement to the Plaza Viva pergola awning.

- Protects against cool side winds
- Shelters from prying eyes
- Heights of up to 250 cm and projections of up to 400 cm
- Easy to retrofit by attaching it to the Plaza Viva posts, a separate pole or a wall

### Wall sealing profile (optional)

The wall sealing profile conceals the gap between the wall and the cassette. This is a useful option if there is no on-site protection above the cassette, e.g. a roof overhang.

# Plaza Viva Fixed post

## Fixed post

The fixed post's standard length is 2,600 mm.

On request the fixed post's bottom sections can be supplied extra-long (e.g. for setting in concrete)

The post's recess measurement is min. 150 mm, max. 25% of the projection, max. 1,000 mm

The inside post (50 x 50 mm) is always approx. 400 mm long.

Compensation joint

Compensation joint for multi-section units

Inside post  
50x50 mm

Spindle nut with  
cover cap

Outside post  
70x70 mm

Post plate with  
cover cap

# Plaza Viva Valance Plus

## Valance Plus – more privacy thanks to vertical privacy and sun screen (optional)

The gear handle operated vertical sun protection is integrated elegantly into the Plaza Viva/LED front profile.

- Glare protection and privacy shield up to a maximum valance height of 210 cm
- Only possible with gear drive, only extend and retract the Valance Plus with the telescopic post cranked up
- Valance Plus use up to a Plaza Viva pitch of 4° to 20°.
- Can be combined optionally with the LED Design light bar
- Valance Plus cannot be retrofitted
- With Valance Plus, the fabric support roller is always mounted above the side channel

**Please note:** the Valance Plus should be extended and retracted slowly to guarantee that the fabric winds up neatly.

\* Max. roll widths are stipulated in the collection brochure

Please note: On the gear-driven Valance Plus, it is possible that the Valance Plus bottom rail will close unevenly.

# Plaza Viva Controls

02

## Installation location for receiver, power supply pack and further electrical components

The receiver is accommodated in the cassette. The faceplate (not shown here) can be really easily opened for servicing purposes. The receiver is then easily accessible.

① The cover can be opened for servicing purposes, e.g. to disconnect the drive from the control components (only BiConnect).

### Update

Cables can be inserted into the channel on the back of the cassette using the V2 cable fixing elements.

## weinor BiConnect radio technology

Product	Electronics	BiConnect control	Remote receiver	Transmitter

Plaza Viva LED Plaza Viva LED OptiStretch	<ul style="list-style-type: none"> <li>In the cassette</li> </ul>
Plaza Viva Plaza Viva OptiStretch	<ul style="list-style-type: none"> <li>No power supply pack necessary</li> </ul>

### Installation location for power supply pack for option LED

The power supply pack is located in the cassette and is easily accessible. The installation location is not required for drives without LED options and remains empty.

# Plaza Viva Stretch/OptiStretch

## The Stretch and OptiStretch system in comparison

The Plaza Viva Stretch and OptiStretch consist of identical frame constructions and use the same tried and tested weinor clamping system with a new flat rope that winds up extremely quietly. The fabric guide is the difference between the two systems.

In the Stretch System, the fabric is tensioned between the fabric roller bearing and the front profile in the ascending direction, while in the OptiStretch, the fabric is additionally guided sideways in the guide rail.

The OptiStretch thus achieves a significantly higher degree of fabric tensioning.

The fabric slack depends on the width and drop of the Plaza Viva and can be up to 15 cm.

### The Stretch system

- Held captive on 2 sides
- With corner reinforcement
- Cost-effective solution
- Easy installation
- Fabric gap up to 25 mm
- Good fabric tension also for Soltis® fabrics

### The OptiStretch system

- Held captive on 4 sides
- With strip reinforcement
- No edges hanging down the sides
- No light gap
- Soltis® fabrics are not available for the OptiStretch version

## Fabric tensioning technology Rope clamping system

**Tension system with 2 tensioned springs (number of springs depends on the projection and width)**

**Tension system with 1 tensioned spring (depends on projection and length of spring)**

# Plaza Viva Planning

## Use of fabric support roller at bottom

A fabric support roller is used at the bottom as standard with a projection > 4000 mm.

With locations exposed to winds we recommend using additional fabric roller supports (option).

The fabric support rollers can be retrofitted at any time without too much effort.

## Use of fabric support roller at top (with Valance Plus option)

With the Valance Plus option the fabric support roller (from a projection > 4000 mm) is fitted at the top as standard.

Multi-section units

The maximum size of a Plaza Viva is 6,000 x 5,000 mm. Wider systems can be extended easily to become a multi-section unit by placing single-unit systems next to each other, the total width for multi-section units is 12 meters, max. 50 m<sup>2</sup> fabric area (see table below).  
The single-unit systems installed next to each other have a separate motor drive and can thus be retracted and extended separately. The telescopic post can only be used on the right and left but not in the centre.

Fabric area Plaza Viva multi-section units

Projection in cm	Width in cm

## Determining dimensions

The patio depth (T) and projection (B) as well as installation height and delta using the example of the angle of pitch 4°, 5°, 10°, 14°, 20° and 25° can be determined using the following tables.

### Fixed post: determining the patio depth (T) and projection (B)

#### Determining the patio depth (T) (up to inside edge of post)

Angle of pitch (α)	Projection B (in mm)					
	2500	3000	3500	4000	4500	5000
4°	2355	2854	3353	3851	4350	4849
5°	2352	2850	3348	3846	4344	4842
10°	2326	2819	3311	3804	4296	4788
14°	2294	2779	3265	3750	4235	4720
20°	2224	2693	3163	3633	4103	4573
25°	2146	2599	2923	3506	3959	4412

Patio depth (T) in mm (rounded figures)

#### Determining the projection (B)

Angle of pitch (α)	Patio depth (T) in mm					
	2500	3000	3500	4000	4500	5000
4°	2645	3147	3648	4149	4650	
5°	2649	3151	3653	4155	4657	
10°	2676	3184	3692	4200	4707	
14°	2712	3227	3743	4258	4773	
20°	2794	3326	3859	4391	4923	
25°	2890	3442	3994	4546		

Projection (B) in mm (rounded figures)

### Telescopic post: determining the patio depth (T) and projection (B)

#### Determining the patio depth (T) (up to inside edge of post)

Angle of pitch (α)	Projection B (in mm)					
	2500	3000	3500	4000	4500	5000
4°	2225	2724	3223	3721	4220	4719
5°	2222	2720	3218	3716	4214	4712
10°	2196	2689	3181	3674	4166	4658
14°	2164	2649	3135	3620	4105	4590
20°	2094	2563	3033	3503	3973	4443
25°	2016	2469	2923	3376	3829	4282

Patio depth (T) in mm (rounded figures)

#### Determining the projection (B)

Angle of pitch (α)	Patio depth (T) in mm					
	2500	3000	3500	4000	4500	5000
4°	2776	3277	3778	4279	4781	
5°	2779	3281	3783	4285	4787

25°	3034	3586	4137	4689		

Projection (B) in mm (rounded figures)

## Determining dimensions

### Determining the installation height (Ukw) and delta ( $\Delta$ )

#### Determining the patio depth (T) (up to inside edge of post)

Angle of pitch ( $\alpha$ )	Projection B (in mm)					
	2500	3000	3500	4000	4500	5000
4°	2202	2237	2272	2307	2342	2377
5°	2244	2288	2332	2375	2419	2462
10°	2452	2539	2625	2712	2799	2886
14°	2615	2736	2857	2978	3099	3220
20°	2854	3025	3196	3367	3539	3710
25°	3047	3258	3470	3681	3892	4104

Wall bracket bottom edge installation height (Ukw) in mm (rounded figures)

#### Determining the delta: difference between the wall bracket bottom edge (Ukw) and head clearance height (DH)

Angle of pitch ( $\alpha$ )	Projection B (in mm)					
	2500	3000	3500	4000	4500	5000
4°	102	137	172	207	242	277
5°	144	188	232	275	319	362
10°	352	439	612	612	699	786
14°	515	636	878	878	999	1120
20°	754	925	1267	1267	1439	1610
25°	947	1158	1370	1581	1792	2004

Delta ( $\Delta$ ) in mm (rounded figures)

### Recess measurement

The posts can be recessed by up to approx. 25% of the projection and a maximum of 1000 mm. Installation tolerances are specified made-to-order on the installation sheet.

#### Important:

- Plaza Viva with fixed post: there is no risk of pooling from a pitch of 14°
- Plaza Viva with telescopic post: there is no risk of pooling from a pitch of 4° and with fully lowered post
- The Plaza Viva with fixed posts complies with rain class 2 from a pitch of 14°
- With telescopic posts it already complies with rain class 2 from a pitch of 4° with fully lowered telescopic post

#### The Plaza Viva planning aid

Using the clever planning aid you can easily calculate the installation height, pitch and delta value for the height difference between the wall bracket bottom edge and front profile head clearance height by specifying the projection or patio depth you want.

#### Legend:

- B = projection
- $\alpha$  = angle of pitch (roof pitch)
- Ukw = wall bracket bottom edge
- $\Delta$  = height difference (Ukw – DH)
- T = patio depth
- Ueg = straight overhang
- DH = head clearance height

# Plaza Viva Installation

## Wall mounting

Wall bracket

02

Wall bracket (fixed view)

Wall bracket (floating view)

Wall bracket base plate

## Ceiling mounting

235 x 160 x 18 x 180 mm roof mounting with angle bracket, complete

235 x 160 x 18 x 180 mm angle bracket, complete (roof mounting)

Possible use on roof

Front and rear installation option for ceiling bracket

## Rafter mounting

Rafter bracket

Rafter bracket with mounting plate and wall bracket

Adaptor plate for rafter bracket  
180 x 150 x 15 mm

Mounting plate for rafter bracket  
294 x 80 x 15 mm

## Installation on insulated facades using Fischer Thermax 12/16

**Update**

The Thermax 12/16 stand-off installation system from Fischer is suitable for insulated facades as it allows for secure fixing.

### Installation with stand off bracket (special bracket)

80 to 300 mm gaps can be bridged using the stand off bracket.

Plaza Viva with stand off bracket, e.g. to overcome a soil pipe

Stand off bracket

Stand off bracket with wall bracket

### Installation on roof using a stilt (special bracket)

Use of stilt

This special bracket is used for example under roof tiles. The longer plate is mounted under the roof tiles and sealed again on site. This mounting holes are drilled on site after determining the position.  
Please note: We need the house roof angle and length of the round pole (stilt) to install the stilt.

Three-piece special bracket (mounting plate, stilt, wall bracket)

Use for installation on a roof

X = rafter thickness

Y = stilt adjustment range =  $(900 - \text{rafter distance} - 2x)/2$

Z = height of roof structure (tiles etc. ...)

### Installation of Plaza Viva laterally on a wall or in a niche

The Plaza Viva can also be mounted on a lateral wall, niche or next to a Terrazza using the 100 x 50 x 5 x 120 mm wall-mount angle bracket.

100 x 50 x 5 x 120 mm wall-mount angle bracket

### Other application examples

#### Plaza Viva installation beyond a patio roof and/or conservatory

The Plaza Viva is installed on the wall on site using wall brackets and the projection is extended (the head clearance height must be noted for this). With installation without telescopic posts, the Plaza Viva can also be fixed onto the conservatory using support brackets.

#### Installation on a wall (without posts)

If there is a wall on the opposite side, it is possible to mount the Plaza Viva onto the wall without posts using adjustable support brackets.

#### Duofix supporting structure

Two Plaza Viva can be mounted on our Duofix supporting structure to achieve an even larger area of sun shade.

## Post installation

### Post plates

Standard post plate  
(installation on even ground)

Post plate 200 x 100 x 10 mm

Post plate cover cap 210 x 110 x 26 mm

Adjustable post plate for installation  
on uneven ground and Krinner screw  
foundation systems KSF F

Post plate 200 x 160 x 10 mm

### Update

Post plate 200 x 200 x 10 mm

## Post installation

### Update

Post plate 200 x 140 x 10 mm on lateral wall

02

Plaza Viva mounting on a terrace with lateral wall

Mounting post plate 200 x 140 x 10 mm with lateral wall offset

Mounting post plate 200 x 140 x 10 mm on a wall

### Post foundation planning

### Note

The size of the foundation depends on the quality of the ground, the acting loads and the climate conditions (frost depth). The size specified here assumes unfavourable conditions. A smaller foundation may also be adequate depending on the structural conditions.

## Installation with angle bracket

Angle bracket with posts

**Note:**

- The weighted base for posts has a size of approx. 500 x 500 mm, the height is approx. 560 mm.
- As a weighting it is recommended to use 48 stones in size 200 x 100 x 60 mm. This corresponds to a weight of about 125 kg.
- The weighted base for posts is not suitable for use on wind-exposed places.

## Post installation

### Post fixation on concrete floor slabs ①

The standard configuration is the installation of the Plaza Viva with post plates on a given concrete floor. The finished cut length of the post is always indicated on the assembly sheet.

### Bucket foundation ②

Posts are securely fitted into a strong non moving base. The concrete is poured and set at the end of the installation, which simplifies the alignment of the posts.

### Deep-seated foundation ③

The easy and flexible screw attachment on a 700 (w) x 800 (h) x 700 (d) mm screw foundation is carried out like the standard fixation (item 1). The reference height for the crank position as well as for the post height is always TEFF.

### Screw foundation ④

When fixing the posts into soil/earth they are an alternative to conventional foundation fixing. The post length as mentioned on the mounting sheet is increased by the floor level (X).

### Mounting with angle bracket ⑤

Is suitable, for example, when mounting in front of a balcony or a terrace. The calculated post length is increased by the floor level (X).

### Mounting on wall ⑥

When the post is mounted on a wall, the height of the post is reduced by the height of the wall (Y).

### Weighted base for posts ⑦

If it is not possible to fix the post into the ground then the base option can be used. For example a public/pedestrian area, indoor installation, or on a balcony.

TEFF: Top edge of finished floor  
X: Floor recess  
Y: Height wall
