

Patio roof

Terrazza Originale

Terrazza Originale Plus

06

High-quality: The weinor **Terrazza Originale** and **Terrazza Originale Plus** patio roofs convince with their elegant construction, shapely design and high resilience. The modular system can be expanded by vertical glass elements to create the transparent Glasoase®. Other features include sun protection, light and heating. The numerous versions make it suitable for the most diverse types of building and requirements.

115 post for
220 guttering

Rigid roof covering:

Made from 10 mm or 12 mm safety glass. Also possible with 16 mm plastic multi-wall sheets

Terrazza Originale/Plus Highlights

Elegant design:
A seamless look

Rigid aluminium construction:
Tested safety all round

Two roof types:
Many versions

Terrazza Originale

Terrazza Originale Plus

Terrazza Originale the 220 guttering

Terrazza Originale Plus the 220 guttering

Straightforward, functional design:
Posts with integrated, easily accessible water drainage

Expandable system:

Can be retrofitted afterwards with

- Patio lighting
- Tempura
- Sun protection systems
- BiConnect remote control
- Air-conditioning system

Can be expanded by vertical glass elements into the weinor Glasoase®, the transparent weather protection. We recommend the 115 post for perfect installation.

Terrazza originale/Plus Benefits

Elegant design – a seamless look

The weinor Terrazza patio roof captivates through its harmonious design. The elegant yet rigid construction is thought out down to the finest detail:

- No mounting grooves
- No silicone
- Almost no visible screws

Rigid aluminium construction – tested security all-round

The resilient construction is based on structural computations by a certified engineering consultancy.

- No thermal separation
- Highest quality aluminium extrusion – thick profile walls
- Corrosion-proof thanks to aluminium profiles and stainless steel screws
- Snow load of up to 550 kg/m²
- Roof depths of up to 6,000 mm

Rigid roof covering – resilient and shatter-proof

The weinor Terrazza is rated for high-quality laminated safety glass (LSG):

- Glass specification either 10 or 12 mm LSG
- Highly resilient, structurally tested
- Accessible to personnel for maintenance work from a thickness of 10 mm
- 16 mm polycarbonate available as an option (rain noise!)

115 post

90 post

Invisibly integrated downspout

Rainwater is systematically drained away by the downspout discretely integrated into the post. Upon request, the drain can also be fed through a post plate. The optional greenery filter prevents the ingress of leaves and the like into the rain gutter. The Terrazza posts are available selectively as 115 posts (square) or 90 posts (round) to match the style of architecture and home.

DR 160

DR 220

Better statics – larger widths

The guttering is considerably more durable thanks to the new extra headroom of 220 mm compared to 160 mm. Depending on the depth and snow load, up to 20% wider spans can be managed between the posts without reinforcing the guttering with steel. As a result, larger widths are possible without any middle posts.

Terrazza Originale/Plus Benefits – expandable system

Wall mounting

Roof assembly

LED/Design strip light– use of patio into the evening (option)

Strip lights enable the patio roof to be used for longer periods.

- Atmospheric light thanks to special glass lenses
- Highly energy-efficient
- Operating life of 30,000 hours
- Infinitely dimmable when used with BiConnect radio control
- Easy to service: simple replacement of individual LED lights
- Housing in the patio roof colour
- Including connection lead and lead rail
- Easy to retrofit
- Individual length up to 6,500 mm

High-performance Tempura heating system (optional)

Tempura and Tempura Quadra, the energy-efficient infrared heating systems, impress with a heat output of 1,500 watt in a tiny housing.

- Instant heat: no warm-up time
- Turn as required for targeted warmth
- Operate and dim using BiConnect radio control
- Splash protection
- Comes in 47 standard frame colours plus 9 scratch-proof, resistant trend colours with a smart, textured look
- Optional: 150 special RAL colours
- Universal bracket makes it easy to retrofit
- TÜV tested

Sun protection – glare, privacy and heat protection

Sun protection systems from weinor satisfy a host of requirements: they prevent unpleasant dazzle effects and the fading of furniture and carpets. They ensure sideways visual and dazzle protection. And they prevent overheat effects with closed vertical elements.

- Perfectly matched to the Terrazza patio roof
- Can be retrofitted afterwards
- Choice of 150 fabric designs

Under roof awning

The Sottezza II under roof conservatory awning protects against dazzle and UV rays. Perfectly matched to the Terrazza, it is ideally suited for well-ventilated rooms.

The over roof awning

A roof-mounted conservatory awning from the WGM range is the ideal solution for side elements that are closed for the most part. It reduces the greenhouse effect.

Front/side sun protection

The weinor VertiTex vertical sun protection system offers reliable privacy, glare and sun protection. Fitted with a fabric from the screens by weinor® collection, it improves air circulation.

* With roof pitches < 5°:

- With large roof depths and the use of glass staves, there are restrictions with impermeability, if applicable, additional sealing measures are required here.
- Larger deposits form faster in front of glass staves (moss, biofilm etc.).
- With the use of trapezium fillings on the side, the glass area becomes very narrow and therefore neither visually attractive nor very easy to install.
- Using air vents may lead to water getting in (rain due to wind etc.).
- Water that is not drained and water pooling in front of the staves may lead to ice on the roof in cold temperatures.

General notes

Terrazza scope of delivery

All the small parts required to install a Terrazza roof are supplied as standard. Please also note any possible different or additional statements in the commercial or technical confirmation of the order.

Site measuring/Terrazza planning

- Accurate site measuring is a basic requirement for the job to be carried out well. It is the foundation for the roof's production and to establish other construction requirements.
- weinor needs the roof dimension you want. Please make a note of obstacles like: protruding walls, rainwater downpipes, etc.
- Remember: the roof must be aligned straight.
- Permanently mark the cutting check and location of the special features you noted on site.
- Ideally, take digital photos of the installation site. Your technicians will be grateful for the more detailed information from good photos later on. The weinor staff can then get a better idea of what the site looks like and possibly provide you with non-binding details.
- Also measure the current situation on your building site. This makes it easier to talk about any necessary changes without measuring the site again.
- Unless otherwise specified, the glazing elements will be provided in the specified standard version.
- When designing the glazing elements and specifying glass thicknesses, the relevant statutory regulations must be observed at all times. weinor plans the glazing elements according to the lowest wind load (installation height: 0–8 m; dynamic pressure: 500 N/m²) and applies the specified standard glass thickness to the glazing elements. If different GE types are being used, this may result in deviations in the shape and/or colour of the various handles and glazing beads.
- The owner and customer are ultimately responsible for the statics design of the roof, glazing elements and accessories. In this context, the relevant valid statutory regulations must be observed, in particular Eurocode DIN EN 1990 and 1991, which defines wind and snow loads.
- Powder coating: All weinor patio roof and glazing element surfaces are always supplied powder-coated. Caution, deviations in colour: the degree of sheen in the coating and different powder manufacturers may lead to deviations in colour occurring. The critical colours are RAL 9006 and RAL 9007 as well as all metallic (WT) colours.
- As a rule, production will not commence until after written approval of the order. Orders placed via the E-Shop

are accepted without written approval and forwarded to Production immediately after the order confirmation has been dispatched. No collateral agreements will be accepted as part of the contract.

- Changes to orders made after an order has been approved are only possible in certain instances depending on how far along the production stage has advanced and will therefore incur an additional charge.

Sun protection

- You can either provide sun protection for the Terrazza roof using a WGM Top or undermounted Sottezza II conservatory awning.
- The weinor VertiTex II can provide sun protection for the front. This also provides glare and privacy protection.

Installation

- Check the structural conditions: foundation, floor panel, cutting check, masonry
- Check the drawing according to Engineering
- Preparatory work:
 - Check the roof and accessories scope of delivery with parts list/drawing from the confirmation of the order
 - Unpack the scope of delivery
 - Check it for damage
 - Start installation
 - Instructions are available for installation.

Recommended installation material (not in scope of delivery)

- Fixings for mounting the roof to the wall and floor
- Fixings for glazing elements
- Glazing blocks, silicone, sealing glue, Kompri-Band, films, filler cord, insulation material, PU foam
- Weather protection angle bracket above the wall bracket
- Spacers for shimming glazing elements onto the floor

In case of complaints

If something appears to have not been carried out to your satisfaction:

- Take a photo of the package concerned (if possible, a digital photo).
- Make a detailed note of the causes, e.g. the actual dimensions of the supplied package. Our technicians can then compare the dimension with the target dimension to quickly establish the causes.
- Make a detailed note of the target dimension you would have expected. Our technicians can often draw important conclusions from this and give you more tips
- Please immediately contact the weinor office.

Guttering steel reinforcement bar

160 guttering – steel reinforcement bar

Without steel reinforcement bar

1 x 140 steel reinforcement bar

2 x 140 steel reinforcement bars

Guttering weight – 160 guttering	excluding steel	1 x 140 steel	2 x 140 steel
kg/m (without side cover caps)	4.0	15.0	26.0

220 guttering – steel reinforcement bar

Without steel reinforcement bar

1 x 140 steel reinforcement bar

2 x 140 steel reinforcement bars

Guttering weight – 220 guttering	excluding steel	1 x 140 steel	1 x 180 steel
kg/m (without side cover caps)	6.5	17.5	19.5

The maximum spans depend on the roof depth and required snow load. You can find the details about this in the current weinor Terrazza price list.

Guttering steel reinforcement bar

Special feature: and only from weinor!

The steel reinforcement bar and roof gutter profile can be ordered separately. Thanks to the removable back of the 220 guttering, the 140 and 180 mm steel reinforcement bar can be inserted into the gutter from the back afterwards. This significantly reduces the weight for transport and installation.

Weight (kg/m)	220 guttering	140 steel	180 steel
Individual weight	6.5	11.0	13.0

Guttering protective leaf grill

160 guttering protective leaf grill

220 guttering protective leaf grill

Variable post positions

Terrazza Originale with indented posts

If the outer posts are indented, the centre post can be omitted for certain roof dimensions. Additional steel reinforcement bars in the guttering or the crossbeam also permit the number of posts and spacings to be changed.

Flexible reactions to structural situations that call for the variable positioning of the posts are also possible.

Roof overhang *
= 1/3 total depth, but min. 400 max. 700

Maximal indent dimension of the posts

View from below

View from below

The maximum spacing between the posts can be increased via steel inserts in the guttering. Caution, this can increase the weight of the rain gutter. As snow loads increase, the maximum post spacings reduce accordingly.

Transoms and roof vents

Transoms in the roof area

From a pane length of 3,000 mm, it is advisable to split the roof glazing by means of a rigid transom.

The transom in the roof also stiffens the construction, hence improving its structural stability. This is relevant, for example, when using vertical all-glass elements, such as glass doors or side parts.

Roof support with ready-mounted transom

WeiTop DL permanent roof vent

A clever solution: the two offset glass panels of the WeiTop DL permanent roof vent ensure permanent ventilation and hence an agreeable climate.

The benefits

- Transparent all-glass solution for an elegant look
- Always powder-coated in roof colour
- Pre-equipped for the specified roof covering thickness (10, 12 and 16 mm)
- Optional insect screen or winter faceplate for manual assembly

Terrazza Originale/Plus Posts

Drain and posts

Terrazza Originale/Plus Sun Protection

Overlay sun protection

WGM Top – over roof heat protection

Over roof conservatory awnings from weinor protect the Terrazza patio roof or the Glasoase® from excessive heat build-up.

WGM Top on Terrazza

Installation on weinor Terrazza

Support bracket mounting plate

For weinor Terrazza
L 150 roof support

For weinor Terrazza
S 110 roof support

Adaptor plates

A support bracket preparation is optionally available for conservatory awnings – perfectly matched, as from one system.

Installation on a Terrazza patio roof

Determining the projection of the conservatory awning

Depth of Terrazza (mm)	1000	1500	2000	2500	3000	3500	4000	4500	5000	5500	6000
Roof pitch 5°	1108	1610	2112	2614	3116	3618	4120	4621	5123	5625	6127
Roof pitch 15°	1134	1652	2170	2687	3205	3723	4240	4758	5275	5793	6311

Terrazza Originale/Plus Sun Protection

Underlay sun protection

Sottezza II – undermounted glare protection

The Sottezza II is the ideal undermounted sun protection for the weinor Terrazza patio roof and for the Glasoase®. On sunny days, it offers pleasant glare and sun protection.

Sottezza II with glazing elements on a free-standing Terrazza

1-panel unit

2-panel unit or two 1-panel units

Our recommendation and also ideal for retrofitting:

- Sottezza II indented 50 mm on each side
- Standard for orders via Quick & Easy

Sottezza II without glazing elements on a free-standing Terrazza

1-panel unit

2-panel unit or two 1-panel units

Sottezza II flush outside on the roof support

Side view of the Sottezza II

The sun protection runs below the roof support. Combined with LED light bars or LED Design, the Sottezza II must be mounted using suitable spacers at a spacing of 30 mm to the roof supports.

Determining the projection of the Sottezza II (applies for Terrazza)

Depth of Terrazza (mm)	1000	1500	2000	2500	3000	3500	4000	4500	5000	5500	6000
Roof pitch 5°	940	1442	1944	2445	2947	3449	3951	4453	4955	5457	5959
Roof pitch 15°	959	1476	1994	2512	3029	3547	4064	4582	5100	5617	6135

Terrazza originale/Plus Glasoase®

Glazing elements

The weinor Glasoase® elegant conservatory cooling system comprises a Terrazza patio roof and flexible or fixed, all-glass elements. All system components are available from weinor. This creates a host of combination options. The most diverse glazing elements offer protection where it is required, and allow the Glasoase® to be opened whenever desired.

Fixed-glazing side elements
SUPER LITE w50-c

SUPER LITE w50-c side element

- Maximum transparency
- Adds fixed glazing to the Glasoase® design
- Very attractively priced
- All-glass fixed glazing under the side Terrazza roof support

LITE w50-c side element

- Highly transparent
- Attractively priced
- Fixed glazing below the Terrazza side patio roof support (trapezium), can be combined with w17 easy

CLASSIC side element w50-c

- Extremely robust and stable
- Load-bearing
- Very good value for money
- Fixed glazing below the Terrazza side patio roof support (trapezium with vertical staves), can be combined with w17 easy

weinor all-glass walls

Alongside an all-round view, weinor all-glass walls provide reliable protection against the wind and driving rain. Available as fixed or sliding models depending on your preferences and needs. All systems are basically suitable for patio roofs, loggias and balconies.

Full glass sliding door w17 easy

- Opens sideways
- Actuator for easy closing
- Requires several guide rails
- Standing construction

weinor Glasoase® Benefits

Frameless all-glass elements allow the weinor patio roof to be expanded into the Glasoase®. This creates transparent weather protection with an unspoiled panoramic view to prolong the patio season. All weinor system components fit together perfectly and can be retro-fitted.

Flexible, vertical all-glass elements

enable, depending on the version, partial or complete opening of the Glasoase® – to suit individual requirements

Fixed glazing

For complete sides or sideways trapezium glazing, can be combined with flexible all-glass elements

Suitable sun protection

Glare, heat and privacy protection with sun protection solutions as required

Expandable system

Can be retro-fitted with other accessories even after many years, thanks to the modular range:

- Patio lighting
- Tempura
- Roof vent
- BiConnect remote control
- Roof or vertical sun protection
